### PROFESSIONAL SUMMARY

Senior Software Engineer with 8+ years of experience designing, modernizing, and delivering enterprise applications using C#.NET, ASP.NET Core, Angular, TypeScript, REST APIs, and relational databases. Strong background in application architecture, API design, production reliability, performance optimization, technical leadership, and end-to-end feature ownership. Expanding this foundation into Applied AI through hands-on development of LLM-powered applications, AI-assisted engineering workflows, document intelligence, prompt-driven automation, and API-based AI integrations.

### CORE TECHNICAL SKILLS

|                                |                                                                                                                                                                  |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Back-End:</b>               | C#, .NET Core, ASP.NET Core, ASP.NET Web API, Entity Framework, NHibernate, LINQ, REST APIs, authentication/authorization                                        |
| <b>Applied AI:</b>             | LLM applications, OpenAI API, AI-assisted development, prompt engineering, document intelligence, AI summarization, structured LLM workflows, AI API integration |
| <b>Front-End:</b>              | Angular, TypeScript, JavaScript, RxJS, NgRx, Kendo UI/Telerik, Bootstrap, HTML5, CSS3                                                                            |
| <b>Data &amp; Performance:</b> | Oracle, SQL Server, T-SQL, stored procedures, relational data modeling, query optimization, payload reduction, API tuning                                        |
| <b>Delivery &amp; Quality:</b> | Git/GitHub, Jenkins, Octopus Deploy, CI/CD, xUnit, MSTest, Jasmine, Karma, PagerDuty, incident response                                                          |
| <b>Leadership:</b>             | Application architecture, technical design, code reviews, engineering standards, mentorship, technical scoping, Agile/Scrum                                      |

### PROFESSIONAL EXPERIENCE

#### Senior Software Engineer - Cotality (formerly CoreLogic) | Dec 2021 - Jun 2026

- Delivered end-to-end enterprise capabilities spanning .NET Core APIs, Oracle data access with NHibernate, and Angular/TypeScript interfaces for production workflows.
- Refactored .NET Core Web APIs and optimized data-access patterns to reduce payload size and latency for data-heavy workflows.
- Integrated secure authentication/authorization flows and REST endpoints while coordinating API contracts, data requirements, and UI behavior.
- Defined application architecture and coding standards and led modernization through Angular and UI-library upgrades with zero-downtime releases and approximately 40% fewer post-release defects.
- Applied AI-assisted engineering workflows for development research, code analysis, documentation, migration planning, and technical problem solving.
- Led code reviews, architecture walkthroughs, pair programming, onboarding, and mentorship across Angular, .NET, and data-layer applications.
- Owned production reliability through PagerDuty incident response, root-cause analysis, postmortems, regression testing, and staged Jenkins/Octopus deployments.

#### Software Engineer - Johnson & Johnson | Jun 2020 - Nov 2021

- Designed and shipped full-stack enterprise features using .NET Core services, Angular/TypeScript interfaces, REST APIs, and SQL-backed data access.
- Implemented service-layer business logic and partnered on API contract design, endpoint versioning, authentication flows, and maintainable service boundaries.
- Optimized SQL queries and data-access patterns and collaborated with Product, QA, and DevOps on technical scoping, testing, and production releases.

#### Software Engineer - Berkeley Electric Cooperative | Sep 2017 - May 2020

- Developed full-stack business applications using C#.NET, SQL Server, JavaScript, and REST API integrations for a regional utility serving 100K+ members.
- Delivered features from stakeholder discovery and backend business logic through API integration, UI delivery, testing, and production deployment.
- Created stored procedures, complex T-SQL queries, and reporting solutions supporting business-critical operational and financial processes.

### APPLIED AI PROJECT

#### AI Document Intelligence Assistant | Personal Project | 2026

- Built a Python/FastAPI document-processing application with REST endpoints for PDF, DOCX, and TXT uploads, file validation, structured error handling, and AI-assisted summarization.
- Integrated LLM-based summarization to transform unstructured documents into concise, actionable information through API-based AI workflows.
- Designed modular separation between document processing, AI services, API endpoints, validation, fallback behavior, and error handling.
- Structured the project for extension into retrieval-augmented document Q&A, tool-based workflows, and AI agent orchestration.

### EDUCATION & CERTIFICATION

**Bachelor of Science, Software Development** - Western Governors University

**Google Cloud Certification** - Earned 2022
